SECTION 1

Core Safety & Alignment Concepts

Questions 1–10 of 50

1. What are hallucinations in LLMs, and how can they be reduced? FREE PREVIEW
2. What does AI alignment mean, and why is it critical in real-world systems? FREE PREVIEW
3. How do input and output guardrails protect AI applications? FREE PREVIEW
4. What are prompt injection attacks, and how do they differ in form?
5. How can bias appear in AI systems, and how do you detect it?
6. What is responsible AI, and how do organizations implement it?
7. What is explainability, and why do users and regulators care about it?
8. How is interpretability different from explainability?
9. How do you build trust in AI-driven products?
10. What is grounding, and how does it reduce hallucinations?

SECTION 2

Privacy, Security & Compliance

Questions 11–20 of 50

11 How should AI systems handle personally identifiable information (PII)?

12 What are the main privacy regulations affecting AI systems?

13 How does differential privacy work in model training?

14 What are adversarial attacks, and how do they target AI systems?

15 What is data poisoning, and how can it impact models?

16 How do you prevent re-identification from anonymized data?

17 What are the risks of using third-party or open-source models?

18 How do you detect hidden backdoors in pre-trained models?

19 What are key copyright risks in AI-generated outputs?

20 How can AI systems avoid reproducing copyrighted content?

For answers & the full bundle

Check the link in the caption

SECTION 3

Guardrails Design & Reliability

Questions 21–30 of 50

21 What are guardrails in agentic systems, and why must they be layered?

22 How do tool-level guardrails differ from content-level guardrails?

23 When should you use prompt-based filtering vs rule-based filters?

24 What is the "defense-in-depth" approach in AI safety?

25 What is the "default to safe" principle in guardrail design?

26 How do you design safeguards for high-risk use cases (healthcare, finance)?

27 What is knowledge editing, and how can it fix model behavior?

28 How do knowledge graphs improve grounding beyond standard retrieval?

29 What software engineering practices improve AI system reliability?

30 What is the checkpoint and rollback pattern for AI systems?

For answers & the full bundle

Check the link in the caption

SECTION 4

Failures, Risks & Mitigation

Questions 31–40 of 50

31 How do you prevent misuse or abuse of AI systems in production?

32 What steps would you take after an AI system makes a harmful decision?

33 How do you run a post-mortem after an AI failure?

34 How do you design an incident response plan for AI systems?

35 How do you prevent feedback loops that reinforce bias?

36 How do you handle proxy variables that indirectly encode sensitive attributes?

37 How do you defend against poisoning in federated learning setups?

38 How do you ensure fairness across intersectional groups?

39 How do you adapt moderation systems across different cultures?

40 How do you reduce environmental impact from training large models?

For answers & the full bundle

Check the link in the caption

SECTION 5

Governance, Ethics & Regulation

Questions 41–50 of 50

41 What is the role of AI governance frameworks in system design?

42 How do emerging regulations impact AI development practices?

43 What challenges do policymakers face when regulating AI?

44 What legal risks arise from AI-generated outputs?

45 How should organizations handle accountability for AI decisions?

46 What is the importance of audit logs in AI systems?

47 How do you design systems that support user appeals and feedback?

48 What is the difference between Human-in-the-Loop and Human-on-the-Loop?

49 When should human oversight be required in AI workflows?

50 What ethical considerations should guide deployment in high-stakes domains?

For answers & the full bundle
