Vimal Radhakrishnan

Email:Vimal7.aws@gmail.com
Mobile: 0447542255

Technical Skills:

Programming Languages	Java 8/11/17/21
Kubernetes	EKS, GKE
AWS Cloud Computing	AWS: - Lambdas, EC2, ECS, EFS, DynamoDB, S3, SQS, SNS, Kinesis Streams, Elastic Search, Route 53
Containers & Orchestration	Docker, Kubernetes 1.14(GKE)
Databases and NoSQL	Oracle NoSQL DB, Amazon DynamoDB.
Frameworks & Libraries	J2ee, Spring 4.x (Spring IOC, REST, ORM), Spring Cloud, Hibernate 4.x, Spring Boot Microservices.
CI & Build	Docker, Jenkins, Code fresh, Maven 3.0.x, Gradle 5.x
Infrastructure and configuring	Terraform, Cloud Formation, Ansible (basics)
Web Services	REST, Spring REST APIS, Consul Service Discovery
AI Engg	LangChain, LangGraph, MCP, Vertex Ai, AstraDB, Pinecone RAG

Certifications:

- **AWS Solutions Architect Associate**

Summary:

- Over 20+ years of experience including Analysis, Design, Development, and Integration in J2EE based transactional systems.
- **Strong Experience in OPEN BANKING in ANZ using GoLang and Google Kubernetes Engine**
- Experienced in development of scalable, high performance n-tier systems and stand-alone systems.

Vimal Radhakrishnan

Email:Vimal7.aws@gmail.com
Mobile: 0447542255

- Designed and developed scalable **RESTful APIs in Go** using standard `net/http`
- Designed, deployed, and managed **scalable Kubernetes clusters** on **AWS EKS** with automated node provisioning and autoscaling.Implemented **CI/CD pipelines** integrating **Jenkins** for containerized application deployments. Configured **IAM roles, RBAC, and security groups** to enforce secure access controls for pods and services. Managed **EKS networking** including **VPC, subnets, load balancers (ALB/NLB), and ingress controllers**.
- Provisioned and maintained **GKE clusters** with automated node pools and horizontal pod autoscaling using terraform. Managed **networking and service exposure** using **VPC-native clusters, load balancers, and Ingress controllers**.
- AWS security implementations using **IAM**, **KMS**, Security Groups, Nacl**.**
- Hands-on experience in AWS cloud infrastructure design and implementation.
- Hand-on experience with Pipelining, CICD, Terraform, Ansible, Jenkins.
- Expertise in Docker containerized environment, hosting web servers on containers, building Docker images using Docker file
- Extensive experience in developing Cloud based Web Applications and **Spring Boot Microservices**.
- **Experience in designing, architecting and development of Golang based REST APIs and Microservices.**
- Experience building a high performance, horizontally scalable, low latency runtime service in GKE and AWS using cloud native technologies, GoLang **Microservices**, Containers (Docker), Orchestration (Kubernetes), IT automation (Terraform, Cloud Formation), CI/CD (Jenkins).
- Designed and delivered secure, production-grade RAG pipelines on Google Vertex AI using LangChain, LangGraph, and hybrid vector search (dense + sparse), building scalable multi-agent systems with robust guardrails and optimized retrieval for high-accuracy LLM applications on Cloud Run.

Professional Experience :

Sage Solutions
Capital One Inc, Washington DC, USA
July 2024 to April 2025

Technologies: Golang 1.25, Java 17/21, EKS, GKE, AKS, Terraform, Docker, Jenkins, AWS, ECS, Route53, SNS, SQS.

Overview:
Turing is a high-security software product developed by Capital One Software that provides advanced

Vimal Radhakrishnan

Email:Vimal7.aws@gmail.com

Mobile: 0447542255

tokenization and de-tokenization services. Designed for flexibility, Turing is customizable to meet specific client requirements and operates under stringent security standards.

Key Features:

- **Tokenization & De-tokenization:** Offers robust data protection through secure tokenization frameworks.
- **Multi-Cloud Treatment (MCT):** Supports deployment across **AWS**, **Azure**, and **Google Cloud Platform**.
- **Cloud-Native Architecture:** Built on **Kubernetes**, leveraging **Helm** for application packaging and deployment.

Responsibilities:

- Designed and developed scalable **RESTful APIs in Go**.
- Implemented clean, maintainable API architectures using **handler–service–repository** patterns.
- Built **CRUD operations**, request validation, routing, and structured JSON responses.
- Developed and maintained Helm charts for seamless deployment of Capital One's *Turing* tokenization platform on Kubernetes.
- Designed and implemented Custom Resource Definitions (CRDs) to extend Kubernetes functionality and support platform-specific requirements.
- Led the deployment of the Turing platform and product components to AWS environments, ensuring high availability and security compliance.
- Integrated the platform with multiple downstream systems, enabling secure and scalable data tokenization workflows.
- Worked within a Multi-Cloud Treatment (MCT) architecture, enabling platform deployments across AWS, Azure, and Google Cloud Platform.
- Contributed to a cloud-native infrastructure built on Kubernetes, aligning with enterprise security and scalability standards.
- Designed and implemented end-to-end RAG pipelines on Google Vertex AI using LangChain and LangGraph, incorporating Supervisor-Worker multi-agent patterns for dynamic orchestration and significantly improved contextual response accuracy.
- Developed optimized VectorDB-based retrieval systems with hybrid search (dense + sparse) and multiple chunking strategies (semantic, recursive, fixed-size) using Vertex AI Search, delivering higher recall and relevance.
- Integrated LangGraph, LangChain, Vertex AI, and Cloud Run to deliver secure, enterprise-grade Retrieval-Augmented Generation solutions with hybrid search capabilities.

Capital One Consumer Identity

Vimal Radhakrishnan

Email:Vimal7.aws@gmail.com
Mobile: 0447542255

The **ConsumerIdentity** domain specializes in the **authentication and authorization** of Capital One customer credentials. Credentials submitted through both **mobile applications** and **web interfaces** are securely verified by the **customer-logins V4** application.

This service is tightly integrated with various **downstream applications**, which retrieve and process customer data as part of the secure login workflow.

Responsibilities:

- Contributed to the VerifEYE domain, specializing in authentication and authorization of Capital One customer credentials across mobile and web platforms.
- Supported the customer-logins V4 application, responsible for securely verifying user credentials submitted via mobile apps and web interfaces.
- Ensured secure and reliable integration with downstream applications to retrieve and validate customer data as part of the login workflow.
- Maintained high standards of security and compliance in customer identity verification processes.
- Led the **migration of SSO V4 APIs to SSO V6**, ensuring improved security, scalability, and compliance with updated authentication standards.
- Integrated SSO services with multiple **downstream applications**, enabling seamless and secure data exchange across systems.
- Executed the **migration of container workloads from ECS to ECS Fargate**, reducing infrastructure management overhead and enhancing deployment efficiency.
- Designed, developed, and enhanced **RESTful APIs** to support evolving business requirements and improve service reliability.

SiesmaTechnologySolutions

Aug 2022 to July 2024

NAB Digital Cards

Technologies: Java 17, Spring Boot 3.x Micro Services, AWS, ECS Fargate, Confluent KaLa, Docker, ECS, EFS, RDS, Jenkins

PayPal PushProvisioning Integration:

Nab CARDS specializes in Design, Develop of Domain based Microservices based on Spring boot 3.x version and deployed to AWS platform.

Paypal push provisioning allows Paypal users to quickly and securely add their Paypal account or linked payment cards to digital wallets like Apple pay, Google pay Samsung pay without manual input. With this process users can push their payment details directly from Paypal to the wallet app.

The CARDS Domain Specific Microservices was Integrated with KONG ApiGateway to accept

Vimal Radhakrishnan

Email:Vimal7.aws@gmail.com
Mobile: 0447542255

North-South and East-West invocations.
The Microservices were layered as Process and System Layer which communicates to Data power which in turn communicates to Mainframes. A messaging system was established using Kafka for the complete decoupling of the Microservices.

Responsibilities:

- Design and of Development of APIs on Spring Boot Micro service
- Integration of multiple downstream Microservices.
- Design, Develop, Integration of Java 17 based components on AWS Platform.
- Integration and Deployment of Microservices using **EC2** and **Docker**.
- Developed messaging system using Confluent Kafka and Spring boot.
- Decommissioned S3 buckets and introduced **AWS EFS** for Reconciliation process.
- Contributed to NABServ framework in Terraform modules and Ansible.
- Migrated the Spring based Microservices to Azure Kubernetes Service as part of MCT.
- Contributed for the development of **ECS** deployment scripts in Ansible and Terraform.
- Worked with **AWS SSM** for patching of the **ECS - EC2** Instances.
- Development of Jenkins jobs on AWS for the newly added Microservices

Cognizant Technology Solutions

Dec 2021 to Aug 2022
ANZ Open Banking

Position: Principal Software Engineer
Technologies: Java, Golang, Micro Services, GKE, Istio, Terraform, Helm, Codefresh

ANZ Microservice and Open Banking specializes in Design, Develop of Domain based Microservices based on Golang and deployed to the GKE platform. Istio Service mesh is used to intercept the traffic and forwarded to the Microservices. An Eventing framework is developed for messaging to the other consuming systems.

The Microservices are deployed into GKE and Istio and deployed using Helm Charts.

Responsibilities:

- Development of APIs in Golang.
- Integration of multiple downstream Microservices.
- Design, Develop, Integration of Golang components on GKE Platform

Vimal Radhakrishnan

Mobile: 0447542255

Cognizant Technology Solutions
Dec 2019 to Nov 2021
NAB Microservices and Open Banking

Position: **Senior Architect/Cloud Api Engineer**
Technologies: Java 8 / 11, Spring 4.0, Spring Boot Microservices, Docker, ECS, EFS, RDS, Jenkins, Terraform, Ansible, AKS

Nab Microservice and Batch enablement specializes in Design, Develop of Domain based Microservices based on Spring boot 2.x version and deployed to AWS platform. The EMS Specific Microservices was Integrated with KONG ApiGateway to accept North-South and East-West invocations.
The Microservices were layered as Process and System Layer which communicates to Data power which in turn communicates to Mainframes. A messaging system was established using Kafka for the complete decoupling of the Microservices.

Responsibilities:

- Design and of Development of APIs on Spring Boot Micro services.
- Integration of multiple downstream Microservices.
- Design, Develop, Integration of Java 8 based components on AWS Platform.
- Integration and Deployment of Microservices using **EC2** and **Docker**.
- Developed messaging system using Confluent Kafka and Spring boot.
- Decommissioned S3 buckets and introduced **AWS EFS** for Reconciliation process.
- Contributed to NABServ framework in Terraform modules and Ansible.
- Migrated the Spring based Microservices to Azure Kubernetes Service as part of MCT.
- Contributed for the development of **ECS** deployment scripts in Ansible and Terraform.
- Worked with **AWS SSM** for patching of the **ECS - EC2** Instances.
- Development of Jenkins jobs on AWS for the newly added Microservices
- Deployment of services to the Production environment

Cognizant Technology Solutions
Oct 2018 to Oct 2019
ANZ DCX Mobile Application

Position: Senior Architect/Cloud Api Engineer
Technologies: Java 8, Spring 4.0, Spring Boot Microservices, Jenkins, Docker, GKE 1.14, Jenkins.

Responsibilities:

Vimal Radhakrishnan

Email:Vimal7.aws@gmail.com

Mobile: 0447542255

- Design, Develop of the Goals API and Nudges **API with REST Standards on Spring Boot**.
- Establish the contracts of REST API with different stakeholders.
- Implementing the Goals API and Nudges API.
- Integration of the APIS with different back end systems like APIConnect, Moneythor.
- Introduced CodeGen framework for the existing BFF Application.
- Involved in the development of Goals API in Golang.
- Introduction of Contract first approach for partner integration.
- Designing Hybrid Cloud Model to in-corporate Cloud Architecture into on premise platform.
- Analyzing the system bottleneck and providing solutions for performance improvement of the online platform.
- **Migrating the Goals Application to be deployed in Kubernetes 1.14 in Google Kubernetes Engine as a proof of concept**

Mobile: 0447542255

Sapient Razorfish
Mar 2018 to Sept 2018
www.suncorp.com.au
Suncorp Marketplace App

Position: **Java Application Engineer**
Technologies: Java 8, AWS (EC2, ECS, DynamoDB, S3, SQS, SNS, Cloud Formation, Docker), Spring 4.0, Spring Boot Microservices, Jenkins, Terraform.

Suncorp Marketplace is a digital platform which collects and displays a customer's Suncorp Group products (e.g. Insurance and Banking) in a single place. Marketplace provides access to information, offers and rewards and displays a customer's portfolio of Suncorp Group insurance and banking products across a range of brands in a single place.

Marketplace provides access to a range of products, tools and services from across the Suncorp Group. Provides seamless access between insurance and banking self-service accounts when linked. Developed as a Microservice Layered Architecture on **Spring Boot**, **Spring Framework, and Deployed on AWS Platform.** Provides high availability and a highly scalable system. The server side component for Marketplace API is protected by Axway API Gateway. The OpenID connect Implicit Flow Authentication method is used to protect the server side.

Responsibilities:

- Design, Develop, Integration of **Java 8** based components on **AWS Platform.**
- **Design and of Development Spring Boot Micro services.**
- Configuration and Integration of **AWS SNS and SQS** to the Marketplace System
- Integration and Deployment of Microservices using **EC2** and **Docker**
- Developed the Cloud Formation templates for **AWS Infrastructure components using Cloud formation** and **Terraform**.
- Designed and Developed Jenkin jobs for CI Integration and deployment.

Experis USA
Apr 2016 to Dec 2017
Nike Inc. Portland www.nike.com

Position: **Senior Java Application Engineer /Arch and Design**
Technologies: Java 8, AWS (Lambdas, ElasticBeanstalk, EC2, ECS, DynamoDB, S3, SQS, SNS, Kinesis Streams, Kinesis Firehose, CloudWatch, ApiGateway, ElasticSearch 5.2, Cloud Formation, Docker) Spring 4.0, Spring Boot Microservices, Consul, Jenkins, Serverless, Terraform

PDH Project integrates all the service enabled business domains in Nike. Product Data Hub provides the tools, standards and know-how to service-enable each business domain partner. PDH provides System Agnostic Services developed on **Spring REST API's** designed and developed on AWS Platform to serve business functions–Data as a Service (DaaS) concept. Support Business Users

Email:Vimal7.aws@gmail.com
Mobile: 0447542255

and Processes–Services designed for business functions and follows business domain model–Crossing Domain Boundaries leads to light coupling of the data and services. PDH exposes data in a business oriented canonical form using **Spring Boot Micro services** hosted in AWS using Elastic Beanstalk and Enables Search using **AWS Elastic Search** to which data is indexed by **AWS Lambdas**.

Responsibilities:

- Design, Develop, Integration of **Java 8** based components on **AWS Platform**
- **Design and of Development Spring Boot Micro services.**
- Integration of Services with **Kinesis Streams**.
- **Design and Development of AWS Lambda Functions and deployment using Serverless**
- Design and Development of Security Components using **ApiGateway.**
- Design, Configuration of **ElasticSearch** indices in AWS and integrating with **AWS Lambda** and **Spring boot** services.
- Configuration and Integration of **AWS SNS and SQS** to the PDH System
- Integration and Deployment of Microservices using **ElasticBeanstalk, ECS** and **Docker**
- Developed the Cloud Formation templates for **AWS Infrastructure components using Cloud Formation Templates and Terraform**

Indecomm Global Services
Jenzabar JX ERP
May 2014 to Jan 2015

Position: Lead Developer
Technologies: Java (1.7), EJB3.0/3.1, JSP, Servlets, JAX-WS 2.0, JAX-RS, JMS, Web Logic 12 C, XML, Eclipse Helios, UML,SQL, PL/SQL,Hibernate4.3,Maven,Jenkins.

Jenzabar's flexible Enterprise Resource Planning (ERP) Systems are designed to drive higher performance in your higher education institution. Improve enrollment and student success, reduce operating costs, and increase constituent contributions and engagement with Jenzabar's comprehensive higher education ERPs. Leverage robust functionality and simple controls to streamline and optimize constituent services and school operations from the front door to the back end. They offer performance insights across all departments to help your institution nurture constituent relationships and drive superior results. Integrated data access is available anytime and anywhere for authorized users, promoting collaboration, user satisfaction, and efficiencies throughout your institution.
The enterprise resource planning systems are highly adaptable—use them as stand-alone solutions or add them to extend the functionality of your other systems to make better business decisions for your institution.

Financial Aid:

- Streamline financial aid operations through automated processes

Vimal Radhakrishnan

Email:Vimal7.aws@gmail.com
Mobile: 0447542255

- Track applications and manage communications with students and parents
- Ensure industry compliance for secure data access and sharing
- Generate performance reports
- Track, manage, and maintain compensation
- Simplify comprehensive reporting

Responsibilities:

- Responsible for Design, Coding and Unit Testing of the Product development for Financial Aid Module using J2EE/ Java.
- Designed, Developed and deployed the **Jax-RS 2.2 specific Web Services with Jersey Implementation**.
- Developed the Business Layer Interfaces using **EJB3.0/3.1** and Java Technology.
- Developed **JMS** service listeners and associated Service and Task Handlers with transactional support. Service adapters were written to bridge between existing data and event service implementation to new data structures and functional business/service requirements. Listeners were wired to Weblogic and Glassfish through EJB configuration. **Hibernate 4.3/JPA2.0** was used as the Object to Relational mapping for persistence support.
- Designed and Developed the Hibernate Entities.
- Developed Junit/Mockito tests for integration and unit testing and mocking testing for specific
- functions/classes.
-
- Developed the Data Access Layer using **Hibernate 4.3, EJB 3.0** and **DAO** Pattern.
- Design the HLD and LLD for the FAFSA and ISIR Interfaces
- Responsible for **enterprise application integration (EAI)** with Federal State Application **with JMS.**
- **Development of Messaging, Queue implementation using JMS.**
- Designed and Implemented the Security handling for Web Services using WSS **Framework**
    - and **JaxWS Handlers.**
- Responsible for analyzing code quality using tools like PMD, Check Style, and Sonar.
- Prepared the Functional Spec and SRS for the Financial Aid Module.
- Responsible for Continuous Integration Build, Deployment Process in **Cloud** and Configuration Management using Ant, Maven, Jenkins and other build tools.

Ness Technologies
American Express/Pay Back, Loyalty Partner Solutions, Germany (http://lpsolutions.com)
March 2011 to May 2014

Technologies: Java (1.7), EJB3.0/3.1, JSP, Servlets, JAX-WS 2.0, JMS, WebLogic 12 C, XML, Eclipse Helios, UML, SQL, PL/SQL, Hibernate 4.16, Oracle 11g, OracleNoSQL Data

Loyalty Management Suite (LMS) is a flexible software platform that helps you successfully develop and operate customer loyalty programs. The modular system maps the full chain of customer loyalty

activities – from administering the card and account logic to managing redemption processes and conducting marketing campaigns.

LMS also helps you better understand the needs of your target groups by using software to pool all the information available in your company. In this way, the lifestyle, tastes and preferences of individual customers can be called up at the touch of a button. You can plan and execute marketing activities and analyze their impact. LMS is geared specifically towards the requirements of the airline and retail industries and can be integrated into any existing IT landscape.

Responsibilities:

- Responsible as the Lead developer in Design, Coding and Unit Testing of the Product development for different modules using **J2EE/ Java**.
- Designed, Developed and deployed the **Jax-WS 2.2 specific Web Services by Contract first approach**.
- Designed and Modularized the XSD, the Request Types and Response Types for the Web Services Interfaces.
- Developed the Business Layer Interfaces using **EJB3.0/3.1** and Java Technology.
- Developed **JMS** service listeners and associated Service and Task Handlers with transactional support. Service adapters were written to bridge between existing data and event service implementation to new data structures and functional business/service requirements. Listeners were wired to Weblogic through EJB configuration. **Hibernate 4.16/JPA2.0** was used as the Object to Relational mapping for persistence support.
- Developed Junit/Mockito Integration and Unit tests for integration, unit testing and mock testing for specific functions/classes.
- Developed the Data Access Layer using **Hibernate 4.16, EJB 3.0** and **DAO** Pattern.
- Integrated the Online and Offline Messages [Correspondences, Preferences, Entitlements and Redemptions] from Payback system to the Partners with **Oracle ESB**.
- Responsible for translating business requirements from User Stories into systems functionality and design strategies and patterns to implement functionalities.
- Design the HLD and LLD for the External and Batch Interfaces.
- Responsible for **enterprise application integration (EAI)** with Partner Applications **with IBM MQSeries and JMS.Development of Cache components using Infinispan and Clustering of Weblogic 12.1 C Server.**
- **Development of Session management, Weblogic load balancing and clustering.**
- **Application performance measuring and profiling.**
- **Development of Messaging, Queue implementation using JMS.**
- Involved in the Design of Oracle based Database tables and Schema Definitions
- Involved in Design and Implementation of Schema for **Oracle NoSQL** Database and Functions, Procedures and Triggers.

Aditya Birla Minacs IT Services
Camilion Solutions, Canada, Toronto (http://camilion.com)
October 2007 to February 2011

Position: Lead Java Developer

Vimal Radhakrishnan

Email:Vimal7.aws@gmail.com
Mobile: 0447542255

Technologies: Java (1.5), Spring 2.5/3.0, EJB2.0, JSP, Servlets , Axis 1.4, JAX-WS 2.0, JBoss 4.2.3, Web Sphere 6.1, JMS, XML, Eclipse 3.4.1, UML, SQL, PL/SQL, Oracle 10g, DB2 9.5, SQL Developer, Junit 4.3.1,Cruise Control 3.0, Ant 1.7.

Camilion's Product Authority is a Java, J2EE based product development enterprise solution that is used to configure and rollout applications. Product Authority is best suited to meet the needs of insurers in creating complex Insurance Products with very little development time. Product Authority manages the complete product definition of an Insurance product including rating, form attachment and referrals. It clearly separates processes from products enabling reusability and inheritance. With product authority insurers have software with which they can quickly create products and make their offering to the public very efficiently.

Security Service Interface Integration – PAS

Camilion Solutions, Inc. is a leading provider of enterprise product development solutions and policy administration systems for insurance. Cincinnati Financial Corporation is a premium client of Camilion. The users of CFC will login to their network and try to Access Camilion Solutions Inc. 's PAS, by sending cookie information. A web service call will be invoked which is exposed to JSP, Servlets by CFC to get additional information about the user which in turn will be used for Authentication of the user and his access rights to use PAS.

Responsibilities:

- Responsible as the developer in Design, Coding and testing of the Product Authority System development using Java/J2ee technologies.
- Involved in Development, and production support of multiple versions of Product Authority product
- Involved as Onsite Coordinator of Code development and Quality from Offshore on sprint basis.
- **Development of Different modules using Spring 2.5/3.0 Technologies.**
- **Development of Data Access Layer using Spring JDBC.**
- Development of migration of the product from EJB2.x to Spring Technologies
- **Involved in Integration of the System to third party interfaces.**
- **Development and deployment of the product web services using Spring 2.5/3.0**
- Involved in the design of Oracle Database tables.
- **Development of the User Interface Implementation using JSP2.x and Servlets 2.2.**
- **Development of Messaging System using Active MQ Series.**
- Understand the domain, the business requirements and the technical challenges and update the team.
- Writing, updating and maintaining technical specifications, end user documentation and operational procedures.
- Integration of the Product Authority Modules with legacy systems.
- Implemented the security module for PAS.
- Configured the Cruise Control and SVN for the project.
- Included Design Patterns to improve the system performance.
- Componentized the modules and divided it into functional parts.

Vimal Radhakrishnan

Email:Vimal7.aws@gmail.com
Mobile: 0447542255

- Coding and unit testing including JUnits.
- Conduct code review and provide feedback.
- Provide Design and solution for Technical issues.

Aditya Birla Minacs IT Services
Steria, Hemel Hempstead, UK (http://northernrock.co.uk)
Electronic Trading Systems (ETS2) – Northern Rock
Aug 2005 to Sept 2007

Position: Senior Software Engineer
Technologies: JDK1.4, EJB2.0, JSP, Servlets, JMS, WebLogic 8.1, Struts 1.2.4, StrutsCX - 0.9.5, iBATIS, XML, XSL, XSLT, XPATH, Oracle 10G RAC, Cruise Control 2.7.0, Ant 1.6.

Northern Rock is one of the largest bank and the largest financial institutions based in North East of UK. Its main business includes Mortgage Lending, Personal Lending, Household insurance, Commercial Mortgages and Retail Savings. Electronic trading system is an Internet based enterprise application, which allows Northern Rock bank's customers to access, and performs transactions on their savings online accounts, Mortgage online accounts and unsecured Loan accounts. It also allows customers to perform online mortgage review, apply for savings applications, apply for mortgage applications and apply for Unsecured Loan (USL) applications. Electronic Trading system is highly scalable enterprise application deployed on BEA Web Logic clustered environment on HP-Unix. It interacts with various external systems like **ICL mainframe, Eiger bank wizard, Equifax Secure system, Quick Address System (QAS), eGain, Omiga** etc.

Mortgage Review Online.

Solution provided by Steria for Northern Rock to provide the facility to the customers to review their Mortgage loans after the fixed rate period. It is a Solution for Northern Rock to introduce process efficiency improvements in the Mortgage Review process by allowing the customer to execute

a significant, time-consuming task that currently involves an experienced call center operator. The customers could gather the data about their existing mortgage loan.

This Solution was developed on **Struts 1.2.0** Framework. Business Logic Components were developed using **EJB 2.1** (Session Beans)

IBATIS was used to communicate with the Database. This Solution was communicating with External Systems for retrieving and submitting the data. **JMS** was used to communicate with some of the external systems.

Responsibilities:

- **Integration of Data ICL Mainframe**.
- Development of Server Side Business logic.
- Unit Testing with JUnits and CactusTestFrameWork.

Vimal Radhakrishnan

Email:Vimal7.aws@gmail.com

Mobile: 0447542255

- Development of Cron Job Schedulers using Quard1.5.2.
- Integration Testing of the Application.

Savings Online Transactions:

Northern Rock offers online application and administration services for various savings products over the Internet to both existing account holders and new customers.

The online administration services for savings products provides customers the ability to view account statements, pending transactions, interest details, tax details, withdraw or transfer money to other NR/Other Bank accounts, amend interest and nominated bank details etc. Customers can access various online transactions for savings accounts by selecting functionality links/buttons, contained on the Savings account home page. This account home page is displayed once a customer selects the desired savings account from the list of accounts displayed in his/her Customer's homepage, which will be presented after successfully completing the logon using SSO process.

Responsibilities:

- Involved in the complete software development life cycle of the project.
- Design and development of Server Side Business logic.
- Unit Testing with JUnits and CactusTest Framework.
- Development of Cron Job Schedulers using Quard1.5.2.
- Code Reviews, Integration Testing of the Application.

Aditya Birla Minacs IT Services
Uels Test Runner, Steria Switzerland
Nov 2004 to Jul 2005

Position: Senior Software Engineer
Technologies: Web Service, Soap 1.1, Axis1.2, Java Swings, JDK 1.5, Tomcat 4.1.3 Operating System: Windows 2000 Professional.
Database: Microsoft SQL Server – 2000

This Application is for Steria Swiderland who is in the process of building a system to capture and store Supervisory Control and Data Acquisition (SCADA) for Kanton Zurich. It would help an operator to visualize the status of a highway and its components in a central location. There are quite a few hardware components that help in highway management like for instance machines. Various suppliers called BRSystems will supply these hardware components. It is the responsibility of the supplier to report the health, status messages, alarm messages, and other messages of their components to the operator in the lead system.

he UELS TestRunner will ensure that the BR system is ready for communication using predefined protocols. The communication protocol will be SOAP and HTTP. In the production system, the BR system would send periodic messages to the node system and would also receive instructions from the node system. This functionality would need to be simulated by the TestRunner as a series of tests.

A message (SOAP message) sent by the BR system needs to be validated for format, data validity etc. This would need to be performed by the test system and inform the supplier that the tests have been conducted successfully.

Vimal Radhakrishnan

Email:Vimal7.aws@gmail.com

Mobile: 0447542255

The validation of the SOAP messages will be done by using the excel data that was imported. The suppliers will generate their SOAP messages from their own database and will not use the test system's database.

Responsibilities:

- Development of Server Side Business logic
- Development of SOAP Requests
- Developing the Test System and dummy BR System
- Build and deploy the Release
- Unit Testing
- Integration of the Application

Aditya Birla Minacs IT Services
Northern Rock, UK – Key Facts Illustration (KFI).
Dec 2003 to Nov 2004

Technologies: JDK1.3, Applets, Servlets, JSP, UML, HTML, JavaScript, XML, XSL, Twister Application Server, IPlanet Web Server, Servlets Exec, Xpresso 3.5 as gateway, Oracle 8.0.6, Windows 2000.

Electronic Trading System (ETS) is Northern Rock's online banking system of which Mortgages Application is one of the modules. Mortgage Regulation project is a corporate wide initiative to make Northern Rock's mortgage business operations comply with FSA's MCOB final rules. Mortgages Application will provide standard illustrations to all customers prior to applying for a mortgage. These illustrations will provide the customer with information on the costs of the product for which they are applying. The illustrations are to be produced with minimum data input from the user. These apply to all channels of business, i.e. Branch, Direct, and Intermediary.

The project uses services like HTTPS as the protocol, Xpresso as the Gateway, iPlanet the Web Server and Twister as the Application Server. The concept has been implemented using the Repository Defined Objects that lie in the EAI. This system also interacts with Various legacy systems like KFI Engine, Omiga, QAS, PF System, Eiger etc. through the accessors and interface provided by Brokat.

Responsibilities:

- Involved in the complete software development life cycle of the project.
- Involved in UI design for certain modules
- Development of Server Side and Client Side Business logic
- Build and deploy the Release
- Unit Testing
